

RETAIL BUSINESS PERFORMANCE & PROFITABILITY ANALYSIS

Introduction

This project was carried out to analyse retail business performance and profitability using Microsoft Excel. The objective was to understand sales trends, identify profitable categories, and generate business insights using data visualization and analysis techniques.

Abstract

The project focuses on analysing retail sales and profit data using Excel tools such as Pivot Tables and Pivot Charts. Data was organized and summarized to identify business performance across different categories and sub-categories. Visualizations were created to make the analysis easier to understand and to support business decision-making.

Tools Used

- Microsoft Excel
- Pivot Table
- Pivot Chart
- Data Analysis Techniques
- Data Visualization

Steps Involved in Building the Project

1. Imported the retail dataset into Microsoft Excel.
2. Cleaned and reviewed the data structure.
3. Created Pivot Tables to summarize sales and profit values.
4. Generated Pivot Charts for visual representation.
5. Identified key insights from category performance.
6. Prepared a project summary sheet and conclusions.

Project Findings / Key Insights

- Technology showed the highest sales performance.
- Technology generated the highest profit.
- Different categories contributed differently to business growth.

The screenshot displays the Microsoft Excel application window. The title bar reads "project summary - Excel". The ribbon is set to the "Home" tab, showing options for Font, Alignment, Number, Styles, Cells, and Editing. A yellow warning banner at the top states: "POSSIBLE DATA LOSS Some features might be lost if you save this workbook in the comma-delimited (.csv) format. To preserve these features, save it in an Excel file format." Below the banner, the spreadsheet is visible with columns A through U and rows 1 through 21. The data in the spreadsheet is as follows:

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U
